

Focus on your future

Who are we, what do we do?

Assured Learning Australia provides high quality, hands on technical training to support the needs of the automotive industry.

We have developed a range of short courses that have been specifically requested by the industry to develop the skills of technicians who diagnose vehicle system faults whilst also preparing them for future technological advancements.

AUTOMOTIVE OSCILLOSCOPE DIAGNOSTICS

Automotive engine management systems and the associated sensors and actuators are complex systems that produce unique electrical signals when operating correctly. These signals can tell a trained technician a lot about the system when observed using an oscilloscope and can be the difference between correctly diagnosing a vehicle fault or not!

This practical course takes you through routine fault finding using an oscilloscope to test a wide range of common vehicle systems and components. We will build your skills and knowledge to a competent level so that you can implement the skills and techniques learnt the very next day.

Areas covered, include: the main features, setting up to test, component testing, waveform interpretation and analysis and fault identification.

Cost:

\$300 plus GST

When:

8:00am – 4:00pm

Included:

Lunch & Refreshments
Course Notes

How to book:

Contact us below

For more information, please contact us:

A: 1/117 Dundas Road, High Wycombe, WA 6057
